FOREW'ORD

Few phases of art have had more universal appeal throughout the world than ceramics. From the early period, when European production secrets were carefully guarded under royal patronage to the present time of specimens designed by individual artists, there has been a constant interest in the makers and their marks. This interest has reached a high point in the United States where there is to be found a greater diversity of ceramics from all parts of the globe than in any other one country. The vast assemblage of ceramics in America commenced in the colonial period with importations made by wealthy merchants, planters and public officials who were eager to possess specimens of European and Oriental wares. With the advent of tea and coffee the demand increased and sailing vessels arrived in American ports with large cargoes of ceramics. Popular among the number was Chinese Export porcelain and it was not unusual for an individual to order from China an entire dinner service decorated according to special design.

The American market eventually became such a factor that European makers produced wares bearing American scenic views, state coats of arms, important personages and events. Conventional patterns were also made in quantity that mer with popular favor in sectional parts of the country.

Early attempts were made to produce ceramics in the United States beginning with the settlement of Jamestown, Virginia in the 17th century and continuing with varying success until today. Many of the American products show a strong European influence just as the designs of European wares were in turn often copied from earlier Greek, Roman and Oriental specimens. American ceramics, like American furniture, silver, and glass, have a distinct and individual quality of their own, and cannot be considered imitations of European examples.

Recently many facts have been brought to light through research of old records and by excavations of early pottery sites which have made it necessary to re-evaluate the field of American pottery and porcelain for a thorough understanding of the subject.

For some time there has been a real need for a book of ceramic marks within the means of all who are interested in this phase of art. The Handbook of Old Pottery and Porcelain Marks by C. Jordan Thorn is a worthwhile contribution toward this end.

The American section of the book contains the most comprehensive list of marks that has appeared to date, with some new material that should be of interest to ceramic collectors.

INTRODUCTION

In this effort to bring together in one concise volume thousands of pottery and porcelain marks of more than 25 nations, the author has limited the information on the various manufactories to that which is pertinent to the monograms or marks presented. Much could be said historically of many of these factories, but that is not the purpose of this work. It is, rather, an attempt to condense into a readily accessible and simplified form, a complete listing of all known marks, initials and signatures of portery and porcelain works throughout the world. It is designed as a useful guide for collectors, dealers and students, one which will enable the interested to ascertain the origin of their pottery and porcelain by means of the markings found on the base of the pieces.

Easy reference has been provided to each mark in conjunction with the basic information on each factory. As much as possible, each mark has been treated as a separate entity and in most cases specific dates and names are given. The method of marking has also been included and can be differentiated, roughly, as follows:

IMPRESSED: Stamped in the body of the ware while it is still soft.

INCISED: Drawn by hand in the body of the ware while it is still soft.

UNDER-GLAZE IN COLOR: Painted by hand under the glaze. Limited to blue.

OVER-GLAZE IN COLOR: This includes those marks stamped, printed or painted on the exterior of the glaze.

Only a limited amount of information has been presented under the notices on Japan and China, for the following reasons: (1) The subjects are vast and complicated. (2) The presentation for the reader would necessarily be tedious and confusing. (3) Nothing could be compiled on the marks of either nation that could improve upon what has already been published by numerous authorities.

The various grades of pottery and porcelain have been categorized and defined as simply as possible, in order to avoid confusion on the part of unknowing readers. The several types are divided in the following manner:

PORCELAIN: A translucent ceramic ware generally white and usually glazed, characterized by a clear ring when struck. Soft paste and hard paste compose the two types of porcelain. Soft paste porcelain can be scratched by any sharp instrument, leaving a soft powder, while hard paste resists the workings of a tool of this sort. A granular fracture is presented by soft paste, while hard will leave a smooth, curved surface at the break.

- POTTERY: This term includes all wares distinguished from porcelain by being opaque and generally formed of colored clay. (Earthenware, Fayence, Stoneware, etc.)
- EARTHENWARE: Broad term including all pieces made of clay and then baked. (Delft, Fayence, Stoneware, etc.)
- BISCUIT or "BISQUE": White, unglazed porcelain usually found in the composition of groups and figures.
- DELFT: A colored, tin glazed earthenware frequently blue and white, made first in Delft, Holland.
- FAYENCE or FAIENCE: A variety of glazed pottery usually highly decorated in colors. The term is now applied loosely to cover all kinds of artistic pottery, including majolica and delft.

MAJOLICA: Highly decorative, glazed pottery.

STONEWARE: Hard, impermeable, glazed earthenware.

It will be observed that under the heading of "Germany" data will be found on some factories actually lying outside of Germany proper. The unsettled condition of Europe today precludes a permanent national classification for many manufactories. The author has, therefore, seen fit to include under "Germany" those works that were Germanic in character, and, more specifically, those of the Germany-Austria-Hungary group.

The period of years covered by this work extends roughly from 1400 to 1900. Information on the more important factories dating after 1900 will also be found. A large majority of marks shown belongs to the 18th and 19th centuries, which is as it should be, for the great interest in collecting today lies in the wares of this period. Specimens produced before this time are comparatively scarce and, accordingly, knowledge of many of these early manufactories is rather obscure. Generally, however, the reader will find that all of the material compiled is as complete and definite as possible, with a notable exclusion of irrelevant facts.

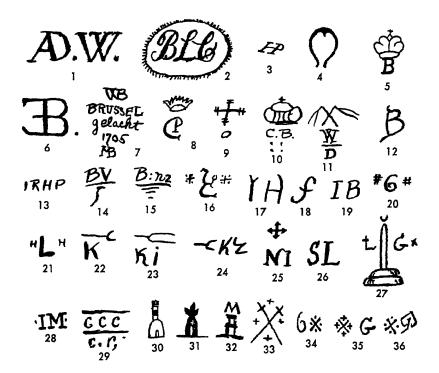

For many years there have been collectors of eighteenth century porcelain, and, in consequence, therefore, new factories have come into existence in the twentieth century to produce imitation products of the authentic early factories. The marks on these imitation products are, as often as not, correct. To deal with the difference between the genuine and the fake is outside the realm of this book, but the discerning collector will readily recognise a fake when he sees one. However, the author has endeavoured to state, wherever possible, the type of porcelain used by the various factories, i.e. Chelsea used a soft paste, whereas

the imitation products of this factory are made in a hard paste. If the student is in doubt as to authenticity of a piece of Chelsea, he has but to examine the porcelain itself. This book is primarily a guide to marks. Other knowledge must come from experience and study.

In the preparation of this work many authorities had to be consulted and much of the material was verified by leading experts in the various fields. The author is particularly indebted to Mr. Frank Stoner, the leading authority on English porcelain, for checking that section of the book and to Mr. David Rosenfeld for applying his vast knowledge of German porcelain to reading and correcting the proofs. For the interest shown by Mr. John M. Graham II of the Brooklyn Museum, undoubtedly the greatest authority on American pottery, it would be impossible to completely repay in gratitude.

Sceaux Penthièvre (23-30)

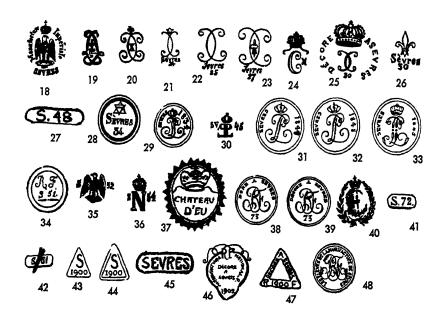

Fayence factory established about 1749. Porcelain was made after 1775. Ceased as an art factory in 1795. 23-25 1772-1795. Richard Glot.

26-30 After 1775.

Sèvres

Factory formerly established at Vincennes in 1745 was removed to Sevres in 1756. Soft paste porcelain was made until 1769 when both soft and hard were produced. The quality of the work fell off after 1793. From 1890 to 1904 date was generally omitted from mark. Sèvres also noted for its fine biscuit, which was not marked until after 1860. Marks until 1793 were generally in overglaze blue. Many imitations of these early marks are found.

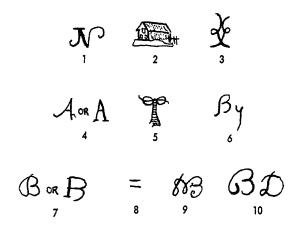

- 1, 2 Early Sèvres or Vincennes. Before 1753. These marks were occasionally used after this date.
- 3 1753. This mark was faked on later wares made in the Sèvres factory and also on modern pieces made elsewhere.

DRESDEN (1-40)

First European hard paste porcelain manufactory established at Meissen, near Dresden, in 1710. Under-glaze crossed swords mark used with variations from about 1724 to present day. In 18th century, on figures the mark was painted on the (usually unglazed) base. In many cases it has disappeared in the firing. Often on figures of that period, the mark appears underglaze and very small at the back of the base. On modern Meissen figure reproductions the mark is generally underglaze with cursive incised letters and/or numbers. Unglazed bases appear occasionally on modern Meissen reproductions and marks are on unglazed base.

24-27 The Bindenschild mark from 1744-1749 was painted as a rule in iron-red, purple or black but sometimes also impressed or incised in the paste in more or less irregular form. From 1749-1827, the mark was painted in underglaze blue for the first thirty or forty years somewhat slantways, rather large and in thick strokes. Berween 1770 and 1810 it became smaller, and rounded in shape. After that, for a long time it was long and narrow and in the 1820's it was almost triangular. In 1827, the blue mark was superseded by an uncolored impressed mark of more regular shape. The last two numerals of the year were often impressed from 1783. The last three after 1800. The factory closed in 1864. Since then many modern reproductions with similar marks have appeared on the market.

Staffordshire

The potters and manufactories in this county are treated separately under the various towns and villages. The towns of Burslem, Cobridge, Etruria, Fenton, Hanley, Lane Delph, Lane End, Longton, Shelton, Stoke, and Tunstall are among those included under Staffordshire. In 1786 there were more than 80 different potters in this district, by 1802 there were more than 150.

Stoke-on-Trent (1-83)

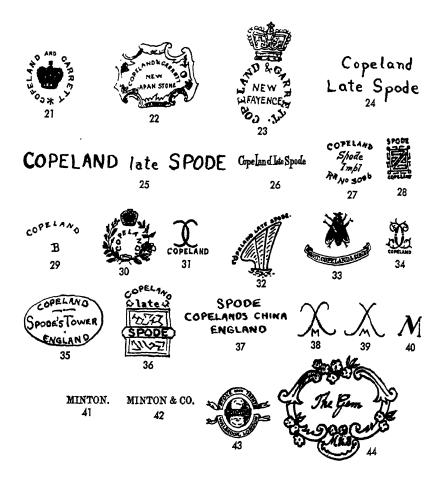

Josiah Spode established in 1784 after potting from 1770. Josiah II was owner in 1797. Wm. Copeland was a partner but died in 1826. Josiah II died in 1827 and Josiah III in 1829. The name then changed from Spode, Son & Copeland to Copeland & Garrett, late Spode in 1833. After 1847 the firm became W. T. Copeland (Copeland, late Spode). In 1867 it

was W. T. Copeland & Sons
Thomas Minton established a factory
here in 1793, Herbert Minton and
John Boyle operated it from 1836 to
1842. Hollins & Campbell were the
proprietors before 1868. Colin Minton Campbell continued after that
date. Porcelain was first made in
1800 and majolica in 1850.

Wedgwood (Etruria) (1-21)

The Wedgwood family was working at Burslem in the 17th century. Josiah was the first to gain fame, having started porting in 1739. Established at Burslem in 1759. Introduced Cream Ware in 1761. Produced black basaltes from 1766. Two years later * * WEDGWOOD Wedgwood

he went into partnership with Thomas Bentley. Invented Jasper ware in 1775. It is doubtful if Josiah I made any other than experimental pieces of Jasper during his partnership with Bentley. Josiah II produced much of this ware. Bentley died in 1780. John, Josiah II and Thomas were Wedgwood's partners in 1790. He died in 1795. There were at least seven, if not twice that many, Wedgwoods working at the same time as Josiah I. Many used the mark "Wedgwood" for their wares. (See notice under Sunderland). The Etruria works were opened about 1770. It is doubtful if many pieces were marked between 1759 and 1769. Porcelain was made from 1812 and to 1816 and from 1878. The Wedgwood factory still operates today under the name Josiah Wedgwood & Sons, Ltd.

Worcester (1-66)

Established 1751—by Dr. John Wall and Company. William Davis managed the factory until his death in 1783. Dr. Wall died in 1776. John and Joseph Flight were the operators in 1783 after the purchase of the fac-

tory by their father, Thomas. Martin Barr was a partner in 1792. Another Barr joined in 1807. George Barr went in in 1813 after the death of his father, Martin.

Robert Chamberlain & Son started business in 1786 by decorating Caughley wares. Flight, Barr & Barr and Chamberlain amalgamated in 1840. The original factory ceased operations in 1847 and Chamberlain continued with John and Frederick Lilly. In 1850 the owners were Chamberlain, Lilly, & Kerr. From 1852 to 1862 the name was Kerr & Binns. The Royal Worcester Porcelain Co. was formed in 1862. G. Solon succeeded W. H. Kerr in 1897 as manager.

The Grainger factory at Worcester existed from 1800 to 1846, James Hadley & Sons established in 1896 fused with the Royal Worcester factory in 1903. Edward Locke founded his works in 1895.

1-16 Various marks of the earliest period of the Worcester factory. The crescent mark also appears on Caughley. 1-8 usually in under-glaze blue.

A June 14, 1852 (Period—1842-1867). **B** June 14, 1875 (Period—1868-1883). From 1842 to 1883 an English registration mark showing the approximate date of manufacture was placed on four types of articles. Earthenware was one of them. The marks (A & B) in the margin are illustrative. Between 1842 and 1867 the letter at the top directly under the circle indicates the year of manufacture. The number at the right shows the day of the month. The letter at the left indicates the month of manufacture and the number at the bottom is a key to the manufacturer. The Roman numeral in the circle at top was used as follows: I for metal objects; II for wood; III for glass; and IV for earthenware.

The approximate year of manufacture is indicated by the following letters:

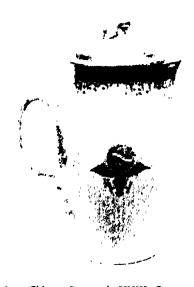

X-1842	P1851	Z-1860
H1843	D-1852	R1861

90 Rare mark on pieces similar to Chinese porcelain.

91 De Ster. 1720-1725.

Pottery was made in Italy from the earliest times and many of the various pieces can be best classified under the broad term "Majolica". Specimens of this ware can be categorized under particular manufactories if information or knowledge of the various characteristics (color, design, paste, etc.) is known. If not, with few exceptions it is inadvisable to determine the origin of any piece by the mark alone.

Majolica can be described as earthenware coated with an enamel that is sometimes lustered. Generally in early services only the largest pieces were marked.

Capo-di-Monte (32-41)

(1743-1759) (1771-1821) Established 1743 by Charles III near Naples. Charles vacated crown in 1759. In 1771 his successor Ferdinand IV revived the works at Portici. They were removed to Naples in 1773 where the Ginori factory at Doccia absorbed many of the old models in 1821. Soft paste porcelain was made from 1743 to 1759. From 1771 hard and soft paste biscuit was made. Old Capo di Monte is rare, but the market today is flooded with spurious specimens generally marked in blue with a crowned "N". Late factories in France, Germany, and Italy produced these recent specimens. (See Doccia). Little is known of early marks.

The notice on this subject is necessarily short because of the limited interest in Japanese ceramics. Pottery was made in Japan from the earliest times. Porcelain was first produced about 1515. The marks on Japanese pottery are generally stamped, painted or incised. Stamps and seals are frequently found. Much old porcelain is unmarked and generally it was not until the 19th century that the individual potters out their

names on their wares. Important oriental marks were frequently copied. Many Japanese marks are written in Chinese.
